DETAILED ACTION

Drawings

1. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claims 2, 6, and 9 are objected to because of the following informalities: Regarding each of the claims, It is the opinion of the examiner that the statement "wherein ... each comprises a D flip-flop..." should be changed to "wherein ...each comprise a D flip-flop..." Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

4. Claims 1, 5, and 8 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: between the first circuit and the second circuit paths.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Wade et al US Patent No. 5,359,630.

7. Regarding claim 1, Wade discloses a method and apparatus for realignment of synchronous data that generates aligned clock and data signals. Wade discloses a circuit for generating aligned clock and data signals (See column 4, lines 17-22 and figure 1), comprising: a clock input (see figure 1, “xmt clk 100”); a first circuit path receiving an external clock signal from said clock input, and generating an aligned clock signal (See figure 1, “fwd clk 102”); and a second circuit path generating an aligned data signal (See figure 1, “data in 101”); wherein said first and second circuit paths comprise identical circuit components (See figure 1 where comprise is an open term).

8. Regarding claim 2, which inherits all of the limitations of claim 1, Wade discloses wherein said first and second circuit paths each comprise a D flip-flop and an output buffer (See figure 1, blocks 8 and 9 and figure 2, blocks 20 and 30).

Allowable Subject Matter

9. Claims 3-4, 6, 7, and 9-11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. US Patent No. 5,115,455 to Samaras et al. discloses a method and apparatus for stabilized data transmission.
- b. US Patent No. 6,738,417 to Kim et al. discloses a method and apparatus for bi-directional data transfer between a digital display and a computer.
- c. US Patent No. 6,751,743 to Theodoras et al. discloses a method and apparatus for selecting a first clock and a second clock for first and second devices respectively from an up-converted clock and an aligned clock for synchronization.
